

ALL-NEW FORD EVEREST

Go Further

Ford Everest begins where the road ends.

Beyond the road is where you find some of New Zealand's most extraordinary destinations. Everest is built to help you discover them all.

Rise Above The Challenge

Unexpected obstacles are an inevitable feature of any good off-road adventure. That's why Everest is built to wade deeper than any SUV in its class, up to 800mm¹. Combine this with an impressive 225mm ground clearance and you'll stay on top of things.

Electronically Adapt To Any Terrain

Everest's innovative Terrain Management System (TMS) helps you tackle any surface, on-road or off, at the turn of a dial. Simply shift-on-the-fly to maximise traction and stability to maintain maximum grip and control. Sand, mud/snow or rock – whatever is in front of you, Everest will take it on.

Descend With Confidence

When descending a difficult gradient, activate Everest's Hill Descent Control system that automatically brakes the vehicle to take you downhill at a controlled and steady pace. This lets you concentrate on steering your Everest exactly where you want it.

Spontaneous Off-Roading Encouraged

If ever you get that sudden urge for off-road adventure, just Shift-on-the-fly and you're automatically ready for serious 4x4 activity. With technologies like Electric Locking Rear Differential and Active Transfer Case you can enjoy ultimate grip and traction as well as full engine torque on both rear wheels, even if one wheel is off the ground.

The Everest consumer brochure contains images of an overseas Everest model. Some differences between the New Zealand and overseas model may exist.
1. Maintaining a steady speed of not more than 7km/hr.

A truly capable SUV is powerfully efficient

Ford Everest's 3.2L Duratorq Diesel gives you the power you need in any situation without sacrificing economy.

Go On, Take It With You

With a commanding 3,000kg¹ braked towing capacity, you can tow your boat or even your accommodation, anywhere the road leads you and beyond.

It's Athletic On The Road Too

Everest may be a serious off-road SUV, but its handling and stability on the open road is pure driving pleasure. Unlike rigid systems, the Everest's superior Watt's Linkage Suspension delivers superior stability and handling, along with maximum comfort.

Exceptional Control In The Curves

Curve Control technology is designed to maximise security on winding roads, by monitoring and reducing your speed should you enter a corner too quickly. Partnered with advanced Traction Control, Electronic Stability Program and Roll Stability Control systems, Everest inspires confidence on the open road.

¹. Maximum towing capacity when using a Genuine Ford heavy duty tow pack and load leveling kit.

Make Ford Everest perfect for you.

Whether you're chasing even more creature comforts or an epic off-road experience, we've got the accessories for your unique adventure.

Tow Pack

Rigorously tested to meet stringent Ford engineering standards with a maximum braked towing capacity 3,000Kg.

Nudge Bar

Not only functional and stylish, This nudge bar meets Ford's stringent engineering and safety standards.

Carpet Mats

Soft feel mats designed for a customised fit.

Technology that's Innovative, Integrated and Intuitive.

Technology is at its best when it enhances an experience. And when it just, works. Everest is packed with clever technology, including things you never knew you needed.

Keep Your Eyes On The Adventure Ahead

SYNC® 2 is all ears. Call family and friends just by saying their name. Ask it to read out incoming texts¹. Play your music the way you like. With SYNC® 2 you can even stay on track with voice-controlled GPS navigation through an 8" colour touch screen. All while your hands stay safely on the wheel, and your eyes on whatever lies ahead.

Who Said An SUV Can't Be City Friendly?

Even when parking is tight, Everest's Park Assist² technology can help you find one. Then watch in amazement as the wheel turns automatically to guide you easily into it. All you have to do is control the accelerator and brake. This is innovation at its best.

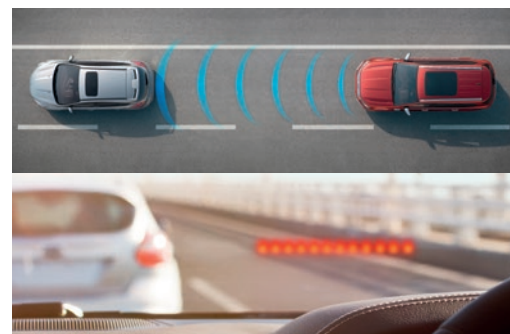

BLIS Can See What You Can't

Blind Spot Information System^{2,3} (BLIS) is your second set of eyes. When changing lanes, indicator lights in your side mirrors let you know if there's a vehicle in your blind spot. So you can see what you can't see. Cross-traffic Alert also notifies you of traffic coming from either direction when reversing out of a parking spot or driveway.

It Can Monitor The Road Ahead

If you're distracted, you could unintentionally drift into the next lane without indicating. Lane Departure Warning⁴ system uses a forward-facing camera to read road markings, so it knows if you've drifted off course. At first it will alert you by vibrating the steering wheel, but if you continue to drift, Lane Keeping Aid technology will apply steering assistance to help guide you back to where you should be.

Set Your Speed, Keep Your Distance

Adaptive Cruise Control with Collision Warning⁵ can help you keep your distance from the traffic in front. If Everest senses slow moving traffic, it slows down. When the traffic clears it goes back to your pre-set speed, or maintains a pre-set distance from the car in front. It can even detect the potential for an accident to occur and alert you with a brake light warning on your windscreen and pre-charges your brakes.

1. Depending on your phone. 2. Available on Titanium model. 3. Driver assistance features are supplemental and do not replace the driver's judgement. Designed to operate at speeds above 10km/hr. 4. Driver assistance features are supplemental and do not replace the driver's judgment. Uses sensors. Designed to operate at speeds over 65 km/h on multi-lane roads with clearly visible lane markings. 5. May help avoid or minimise impact of a collision. It is not a substitute for driver alertness. Function may not operate in some driving and road conditions or adverse weather.

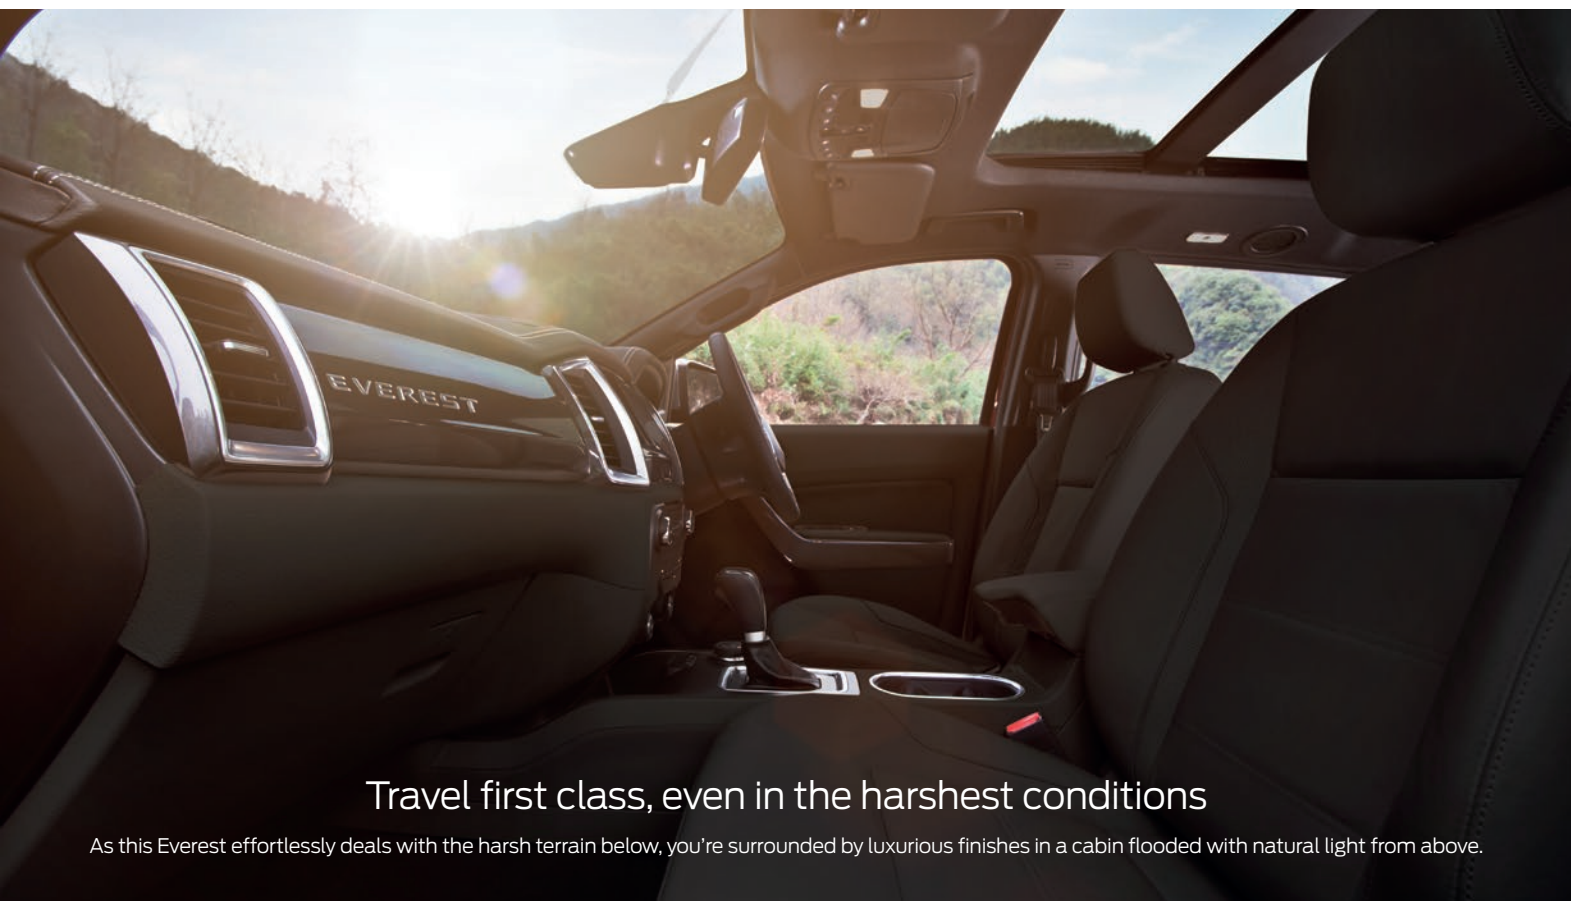

Convenience And Flexibility At Your Fingertips

Everest can quickly and effortlessly adapt to your needs. Whether it's people or luggage, Everest makes it easy to find some extra space. Fold down two or five of the seven seats which come standard or use the Titanium's electric 3rd row power fold to give you a stable surface at the push of a button. A power liftgate can even add the convenience of opening and closing the boot at the push of a button.

Expand Your View Of The World

It's nice when you can appreciate the great outdoors even when indoors. The electronic panoramic moonroof², taking almost 50% of the space, means you can experience nature's best at the touch of a button.

Travel first class, even in the harshest conditions

As this Everest effortlessly deals with the harsh terrain below, you're surrounded by luxurious finishes in a cabin flooded with natural light from above.
